

# RIBBON TREE

## SUPPLIES & TOOLS

- 13-3/4 in. Paper Maché Cone #30212438
- 2 qty. 10 yd. rolls of 1-1/2 in. Wired Ribbon
- Low Temp Glue and glue sticks
- Scissors
- Ruler
- Floral Pick for topper

NOTE: You can also use a Styrofoam cone base and floral greening pins to attach the ribbons. If you use a different sized cone, just adjust the number of ribbon pieces you make. You can also use more than one design of ribbon and alternate between rows.

## INSTRUCTIONS

1. Measure and cut your ribbon into approximately 65 pieces of ribbon in 8 in. lengths.

The number of ribbon pieces you need also depends on the size cone you use.

2. Take each ribbon and fold in half. Slightly gather the raw edges together and glue together.

3. Starting at about 1-1/2 in. from the bottom edge of the cone, glue the top gathered edge of ribbon to the cone.

Continue gluing ribbon around the cone for the first layer.

4. Move up about an inch to make the second row. Glue the ribbon to the cone, positioning them in between the lower ribbon.

5. Continue adding rows of ribbon until you reach the top of the cone.

6. Finish by topping off the tree with a floral pick or ribbon bow.

You can place the tree on a glass candlestick holder or other base. You could also add the tree to the center of a wreath or place inside of a candle ring. You can also add small ornaments, glue in small pieces of floral picks or add in firefly lights.
